Dependency graph of the formalized Procesi identification (H2) in Lean 4

Edges are derived mechanically from the Lean sources (declaration blocks, comments stripped); none are hand-written.

Axiom profile of every theorem shown: propext, Classical.choice, Quot.sound (sorryAx = 0).

No TauCeti lemma occurs on this path (0 references to TauCeti./Procesi.External in the 12 files).

mem_span_sprAlgebraK_iff (the span identity of the bypass) is proved, but the final proof route uses Algebra.adjoin_induction instead, so it is not drawn.
